No margin for magic . . .

We do not believe in short cuts. There is no magic in our method, no mystery in our formula for progress in the air. To meet a set of known requirements we design an aircraft engine. Then, meticulously and with constant re-examination of our thinking and its results, we test it. When, and only when, its practicability is proven beyond doubt, we extend its performance and scope by continuous, painstaking development. Simple as it is, this attitude of mind has yielded such engines as the Sapphire series, now powering thirteen of the world's most formidable front-line aircraft.

Lucky man....

. . . as he has to do the washing up, that there is a Stainless Steel sink to do it in. It makes the job so much easier. The men who use Stainless steels in many industries, know they are right for the job, and the ladies (who also know a thing or two) realise that Stainless steels can be used for many articles in their homes, which not only add to the charm, but mean less work. No polishing is needed, just washing in warm soapy water. "Staybrite" stainless steel is still the ideal metal for the modern kitchen as it was twenty years ago. When you next go shopping, take a long look at the wide variety of sinks, and the many other delightful things that are available.
